NETFLIX CONTENT ANALYTICS

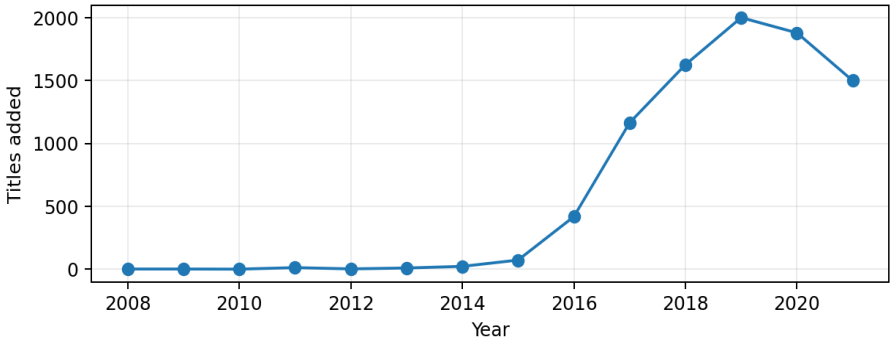

A data-led view of catalog composition, content acquisition, geography and audience ratings

8,807	6,131	2,676	8,709	2019
TOTAL TITLES	MOVIES · 69.6%	TV SHOWS · 30.4%	WITH DATE ADDED	PEAK ADD YEAR · 1,999 TITLES

Catalog mix by format

Titles added to Netflix by year

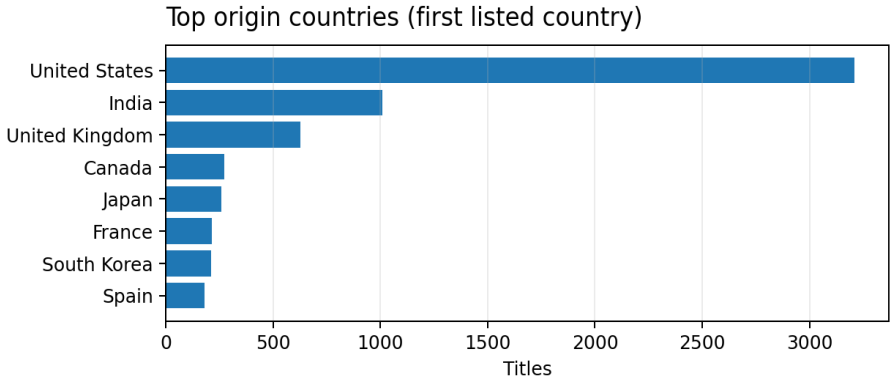

EXECUTIVE TAKEAWAYS

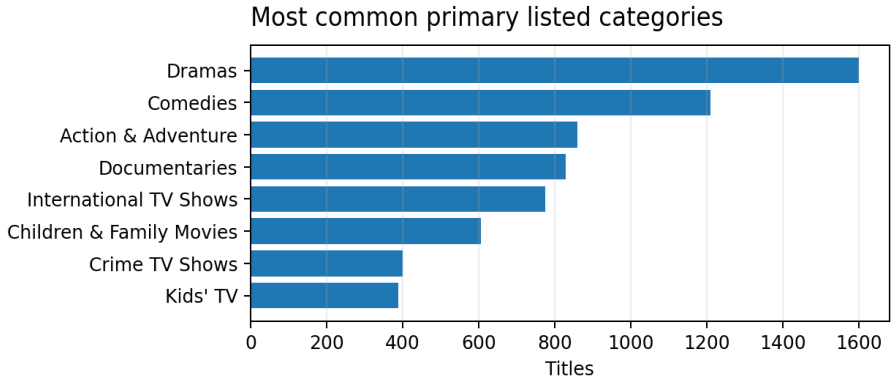

- **Movies dominate the catalog:** 69.6% of listed titles are movies, versus 30.4% TV shows.
- **Content additions accelerated after 2015:** the dataset peaks in 2019 with 1,999 additions, based on the recorded date-added field.
- **Strong US and India representation:** United States is the most frequently listed first country (3,211); India follows with 1,008.

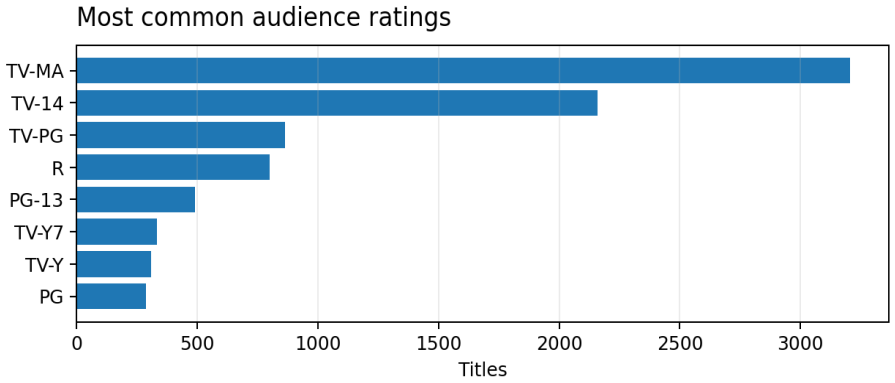

Scope note: this file is a snapshot of titles and metadata, not viewing hours, subscribers, revenue, or current Netflix availability.

CATALOG PROFILE

Where titles come from, which categories appear most often, and what ratings dominate the library.

Key reading

• The most common primary category is **Dramas** (1,600 titles).

• **TV-MA** is the most frequent rating label (3,207 titles).

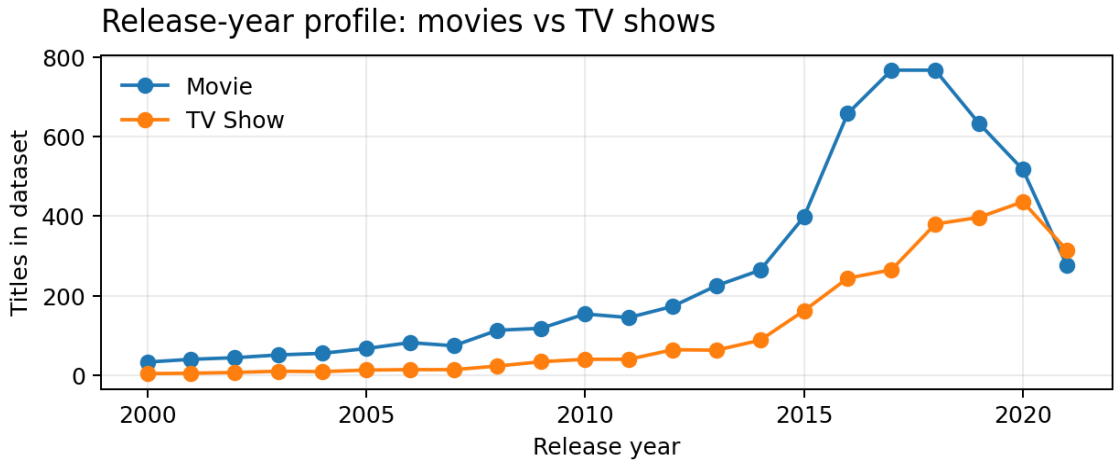

• The United States and India are the two most frequent first-listed country entries. Country values can contain multiple countries; this chart assigns each title to the first country listed, so it is a directional comparison rather than a full co-production count.

• Categories are multi-label in the source. The chart uses only the first listed category per title to avoid double-counting.

Data quality: director is missing for 2,634 titles, cast for 825, country for 831, and date_added for 10. Missing metadata can affect detailed comparisons.

TRENDS & RECOMMENDATIONS

Release-year patterns and practical actions suggested by the catalog metadata.

How to read this chart

The release-year profile describes when titles were originally released, while the previous page's additions chart describes when titles were added to the catalog. They answer different questions and should not be interpreted as the same trend.

Format mix: Movies are about 69.6% of this dataset.

TV series depth: 1,793 of 2,676 TV shows (67.0%) are listed as one-season titles. This may include limited series, but the metadata alone cannot confirm that classification.

RECOMMENDATIONS FOR A PROJECT PRESENTATION

- **1. Segment the catalog:** compare movies and TV shows separately when discussing genre, rating, and release-year patterns.
- **2. Explore regional depth:** investigate India and other prominent markets by genre and format; remember that multi-country entries need a more detailed split for exact country totals.
- **3. Track catalog additions over time:** use date_added for acquisition trends and release_year for content age. Avoid describing additions as original productions.
- **4. Improve metadata completeness:** enrich director, cast, country, and date-added fields before deeper analysis.
- **5. Add business outcomes if available:** viewing hours, completion rates, subscriber engagement, or licensing costs would enable performance conclusions beyond catalog composition.

METHOD & LIMITATIONS

Source: the uploaded netflix_titles.csv file inside archive.zip. Counts reflect rows in this snapshot. Date-added analysis excludes missing or unparseable dates. Country and category charts use the first comma-separated value only. The dataset's release years range from 1925 to 2021, and the latest recorded date-added year is 2021; therefore, this report should be presented as an analysis of the supplied snapshot, not Netflix's live catalog.
